

Project Location

Environmental Mitigation Measures during operation period

- Monitoring air quality in the parameters total dust in work place.
- Controlling dust from transportation.
- Providing preventive maintenance for machines and equipment to keep them in good conditions .
- Controlling the effluent quality to comply with the wastewater standard of Ministry of Industry, Thailand.
- Conducting emergency response exercise regularly.

Objectives and Project Information

Objectives > To transport raw material and product for IRPC Industrial Park.

Project Information

IRPC jetty has 8 wharf for loading petrochemical product and liquid petroleum.

Implementation results of Mitigation and Monitoring Measures

- Ambient air quality: Monitoring total dust in work place. Results of total dust is comply with standard.
- Controlling dust from coal and coke transportation.
- Effluent quality: Monitoring pH, SS, BOD, Grease & oil of effluent. All parameters comply with standard.
- Safety: Conducting emergency response exercise and providing preventive maintenance for emergency alarm system regularly.
