

Project Location

Environmental Mitigation Measures during operation period

- Monitoring air quality in the parameters of TSP,SO₂, NO₂ , 1,3-Butadiene, Isobutane, Propane for ambient air.
- Controlling emission from stack to comply with the emission standard of Ministry of Industry, Thailand.
- Providing preventive maintenance for machines and equipment to keep them in good conditions.
- Controlling the effluent quality to comply with the wastewater standard of Ministry of Industry, Thailand.
- Conducting emergency response exercise regularly.

Project Information

The production of Polypropylene capacity is 630,000 tones/year

Implementation results of Mitigation and Monitoring Measures

- Ambient air quality: Monitoring TSP,SO₂, NO₂, 1,3-Butadiene, Isobutane, Propane in the ambient air. All parameters comply with standard.
- Air emission from stack: Monitoring TSP,SO₂, Nox, emission from stacks. All parameters comply with standard.
- Effluent quality: Monitoring Temp, pH, SS, BOD,COD,TDS, Grease & oil of effluent. All parameters comply with standard.
- Noise pollution : Monitoring Leq 24 hr, L90, Noise Dose. The monitoring result complies with standard.
- Safety: Conducting emergency response exercise and providing preventive maintenance for emergency alarm system regularly.
